

**Name : Haris**

**Roll # 23P-0573**

Mongo sh

Use schoolDB

```
C:\Users\User>mongosh
Current Mongosh Log ID: 681d91e72b4512fdcc0d818f
Connecting to:  mongodb://127.0.0.1:27017/?directConnection=true&serverSelectionTimeoutMS=2000&appName=mongosh+2.3.3
Using MongoDB:  8.0.9
Using Mongosh:  2.3.3
mongosh 2.5.1 is available for download: https://www.mongodb.com/try/download/shell

For mongosh info see: https://www.mongodb.com/docs/mongosh-shell/

-----
The server generated these startup warnings when booting
2025-05-09T10:14:43.248+05:00: Access control is not enabled for the database. Read and write access to data and configuration is unrestricted
-----

test> show dbs
admin  40.00 KiB
config 60.00 KiB
local  72.00 KiB
test> use SchoolDB
```

2. Create two collections:

Students

Courses

```
db.createCollection("Students")
```

```
db.createCollection("Courses")
```

```

SchoolDB> db.createCollection("Students")
{ ok: 1 }
SchoolDB> 23P-0573
Uncaught:
SyntaxError: Identifier directly after number. (1:2)

> 1 | 23P-0573
    |   ^
    2 |

SchoolDB> db.createCollection("Courses")
{ ok: 1 }
SchoolDB> |

```

3. Insert the following documents into the Students collection:

```

db.Students.insertMany([
  { "_id": 1, "name": "Alice", "age": 20, "scores": { "math": 85, "science": 90 } },
  { "_id": 2, "name": "Bob", "age": 22, "scores": { "math": 78, "science": 82 } },
  { "_id": 3, "name": "Charlie", "age": 21, "scores": { "math": 92, "science": 88 } },
  { "_id": 4, "name": "Daisy", "age": 23, "scores": { "math": 68, "science": 74 } }
])

```

```

> db.Students.insertMany([
  { "_id": 1, "name": "Alice", "age": 20, "scores": { "math": 85, "science": 90 } },
  { "_id": 2, "name": "Bob", "age": 22, "scores": { "math": 78, "science": 82 } },
  { "_id": 3, "name": "Charlie", "age": 21, "scores": { "math": 92, "science": 88 } },
  { "_id": 4, "name": "Daisy", "age": 23, "scores": { "math": 68, "science": 74 } }
])
< {
  acknowledged: true,
  insertedIds: {
    '0': 1,
    '1': 2,
    '2': 3,
    '3': 4
  }
}
SchoolDB> 23P-0573

```

4. Insert the following documents into the Courses collection:

```
> 23P-0573
✖ SyntaxError: Identifier directly after number. (1:2)

[0m[31m[1m>[22m[39m[90m 1 |[39m |[35m23[39m[33mP[39m[33m-[39m[35m0573[39m
[90m |[39m |[31m[1m^[22m[39m[0m
>
> db.Courses.insertMany([
  { "_id": 101, "courseName": "Mathematics", "instructor": "Dr. Smith", "studentsEnrolled": [1, 2, 3] },
  { "_id": 102, "courseName": "Science", "instructor": "Dr. Adams", "studentsEnrolled": [2, 3, 4] }
])
< {
  acknowledged: true,
  insertedIds: {
    '0': 101,
    '1': 102
  }
}
SchoolDB> |
```

Above error just for roll number below query is right

5. Use findOne to retrieve:

```
db.Students.find({
  "scores.math": { $gte: 85 },
  age: { $lt: 22 }
})
```

```
> db.Students.find({
  "scores.math": { $gte: 85 },
  age: { $lt: 22 }
})
< {
  _id: 1,
  name: 'Alice',
  age: 20,
  scores: {
    math: 85,
    science: 90
  }
}
{
  _id: 3,
  name: 'Charlie',
  age: 21,
  scores: {
    math: 92,
    science: 88
  }
}
SchoolDB> 23p-0573
```

```
db.Courses.find({
  studentsEnrolled: 3,
  instructor: "Dr. Adams"
})
```

```

> 23p-0573
❌ ▶ SyntaxError: Identifier directly after number. (1:2)

[0m[31m[1m>[22m[39m[90m 1 | [39m [35m23[39mp[33m-[39m[35m0573[39m
[90m | [39m [31m[1m^[22m[39m[0m
> db.Courses.find({
  studentsEnrolled: 3,
  instructor: "Dr. Adams"
})
< {
  _id: 102,
  courseName: 'Science',
  instructor: 'Dr. Adams',
  studentsEnrolled: [
    2,
    3,
    4
  ]
}
SchoolDB> |

```

6. Use find to retrieve:

o Students with math score  $\geq 80$  and science score  $\leq 90$ .

```

> db.Students.find({
  "scores.math": { $gte: 80 },
  "scores.science": { $lt: 90 }
})
< {
  _id: 3,
  name: 'Charlie',
  age: 21,
  scores: {
    math: 92,
    science: 88
  }
}
SchoolDB> 23p0573

```

o Students whose age is  $\leq 23$  or have a math score  $\geq 85$ .

```

>_MONGOSH
> db.Students.find({
  "scores.science": { $gte: 80 },
  $or: [
    { "scores.math": { $lt: 75 } },
    { age: { $gt: 22 } }
  ]
})
<
SchoolDB> 23p0573

```

o Students with science score  $\geq 80$  and (either math score  $\leq 75$  or age  $\geq 22$ ).

```
>_MONGOSH

scores: {
  math: 85,
  science: 90
}
}
{
  _id: 2,
  name: 'Bob',
  age: 22,
  scores: {
    math: 78,
    science: 82
  }
}
{
  _id: 3,
  name: 'Charlie',
  age: 21,
  scores: {
    math: 92,
    science: 88
  }
}
}
SchoolDB>
```

7. Use updateOne to:  
Increase the science score of Bob where math score  $\geq 75$ :

```
> db.Students.updateOne(
  { name: "Bob", "scores.math": { $gte: 75 } },
  { $inc: { "scores.science": 1 } } // Increment science by 1 (adjust value as needed)
)
< {
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}
SchoolDB> 23p0573
```

8. **updateMany** Increase math score by 5 where science < 80 and age > 22:

```
> db.Students.updateMany(
  { "scores.science": { $lt: 80 }, age: { $gt: 22 } },
  { $inc: { "scores.math": 5 } }
)
< {
  acknowledged: true,
  insertedId: null,
  matchedCount: 1,
  modifiedCount: 1,
  upsertedCount: 0
}
SchoolDB> 23p0573
```

9. **deleteOne** Remove student named "Daisy" with science score < 80:

```
> db.Students.deleteOne({
  name: "Daisy",
  "scores.science": { $lt: 80 }
})
< {
  acknowledged: true,
  deletedCount: 1
}
SchoolDB> 23p-0573
```

10. deleteMany Remove courses where studentsEnrolled includes 2 or instructor is "Dr. Smith"

```
> db.Courses.deleteMany({
  $or: [
    { studentsEnrolled: 2 },
    { instructor: "Dr. Smith" }
  ]
})
< {
  acknowledged: true,
  deletedCount: 2
}
SchoolDB> 23p0573
```

11. Drop the Students collection:

12. Drop the Courses collection:

13. Delete the SchoolDB database:

```
> db.Students.drop()
< true
> db.courses.drop()
< true
> db.dropDatabase()
< { ok: 1, dropped: 'SchoolDB' }
SchoolDB> 23p0573
```

Task which we have to done on manual :

- 1) What is the MongoDB query to display all the documents in the collection restaurants?

```
db.restaurants.find()
```

2. What is the MongoDB query to display the fields restaurant\_id, name, borough and cuisine for all the documents in the collection restaurants?

```
db.restaurants.find({}, { restaurant_id: 1, name: 1, borough: 1, cuisine: 1 })
```

3. What is the MongoDB query to display the fields restaurant\_id, name, borough and cuisine, but exclude the field \_id for all the documents in the collection restaurants?

```
db.restaurants.find({}, { _id: 0, restaurant_id: 1, name: 1, borough: 1, cuisine: 1 })
```

4. What is the MongoDB query to display the fields `restaurant_id`, `name`, `borough` and `zip code`, but exclude the field `_id` for all the documents in the collection `restaurants`?

```
db.restaurants.find({}, { _id: 0, restaurant_id: 1, name: 1, borough: 1, "address.zipcode": 1 })
```

5. What is the MongoDB query to display all the restaurants which are in the borough `Bronx`?

```
db.restaurants.find({ borough: "Bronx" })
```

6. What is the MongoDB query to display the first 5 restaurants which are in the borough `Bronx`?

```
db.restaurants.find({ borough: "Bronx" }).limit(5)
```

7. What is the MongoDB query to find the restaurants which achieved a score more than 90?

```
db.restaurants.find({ "grades.score": { $gt: 90 } })
```

8. What is the MongoDB query to find the restaurants that achieved a score more than 80 but less than 100?

```
db.restaurants.find({ "grades.score": { $gt: 80, $lt: 100 } })
```

9. What is the MongoDB query to find the restaurants which are located at a latitude value less than `-95.754168`?

```
db.restaurants.find({ "address.coord.0": { $lt: -95.754168 } })
```
